

Data Centre Consolidation and Relocation

case study

The Challenge

A global Japanese consumer electronics corporation wanted to dramatically reduce baseline operating costs and complexity by undertaking a pan European data consolidation programme.

'Leading Resolutions' strong leadership and expert advice enabled us to painlessly complete one of our largest pan European IT programmes.

The additional differentiating factor which Leading Resolutions bring is their ability to sensitively navigate through the diverse cultural differences that inevitably exist within an organisation of our size.'

Our Solution

- Developed business case
- Set up and ran the tender process for the construction of a state of the art data centre in the UK
- Developed technology strategies and provided specialist project management capability to oversee the programme implementation
- Managed the physical relocation of existing data centre services to the new centre
- Project managed implementation from inception to completion
- Executed project transparently with no impact on business operations

Business Benefits

- Contributing to savings of £2m per annum
- Improved disaster recovery services
- Dramatically improved service levels

Technical Benefits

- High availability solutions implemented
- High performance lower cost based technologies adopted
- Dark fibre high capacity connectivity
- Rationalisation of distributed network and security solutions
- Consolidation of European web and internet technology services
